1.1 Contents

1.1.1 ChangeLog

0.2

- Added proper Sphix documentation and added project to readthedocs.org
- Implemented optional url configuration for handling notes in their own right
- Added views for CRUD of notes from the front-end

0.1

- initial release

1.1.2 Installation

- To install

  ```
  pip install django-notes
  ```

- Add '' to your `INSTALLED_APPS` setting:

  ```
  INSTALLED_APPS = (
      ...
      "notes",
      ...
  )
  ```

- Import the Note model in your model:

```
from notes.models import Note
```

- Add the note inline to your model's admin def in your admin.py file:

```
from notes.admin import NoteInline

class YourModelAdmin(admin.ModelAdmin):
    inlines = [ NoteInline, ]
```

- To enable easy management you can add a hook to your model:

```
notes=generic.GenericRelation(Note)
```

- Finally, if you want to handle/view notes by themselves:

```
urlpatterns += patterns('',
    ...
    (r'^', include('farm.urls')),
    ...
)
```

1.1.3 Filters

1.1.4 Template Tags

Need to document these

1.1.5 Signals

No signals...yet.

1.1.6 Usage

Follow the steps above (including 4) and you should have access to all the notes at instance_of_yourmodel.notes_set.all():

```
> object = YourModel.objects.get(pk=1)
> notes_for_object = object.notes_set.all()
```

Simple.
